

WIRELESS MONITORING SYSTEM

NO. CMS-1

WIRELESS MONITORING SYSTEM

The Monitoring System is a highly functional and user-friendly web-based system that assists lab personnel to protect research specimens, reagents vaccines and other cold storage appliance contents from power failures, human error and other causal factors.

- Local IT Network Secure, no 'Holes' required in firewall, patents awarded, no onsite servers required
- Unlimited # of remote alarm/alert notifications
- Temperature monitored, logged and stored every 2 minutes, 24/7/365
- Customized graphs/reports that can be data specific to lab needs

You will receive one gateway module and one wireless temperature sensor module. Also provided is a 1 year subscription to the cloud base service. One gateway can handle up to 35 sensor modules within a room.
